

Short Film / Video Editing Project

Skills Gained

- Video editing
- Cinematography
- Storyboarding
- Audio editing and sound design
- Color correction and grading
- Collaboration and communication
- Creative thinking and problem solving
- Using Adobe Premiere Pro or DaVinci Resolve

Career Value

This project develops both technical and creative abilities that are useful in:

- Engineering presentations
- Marketing or media internships
- Content creation
- UI/UX and digital design
- Technical communication
- Multimedia production

Strong visual communication skills are valuable in many careers, including engineering and technology fields.

Why Does This Project Interest You?

I'm interested in this project because filmmaking allows me to combine creativity with technology. I enjoy telling stories and learning how editing, sound, lighting, and camera angles can influence emotion and meaning in a film.

How Will This Help with Summer Internships or Next Year?

This project will strengthen my experience with professional editing software and digital media tools. It will also show employers and teachers that I can manage a long-term project, work with others, stay organized, and complete creative work from planning through final production.

Skills to Learn or Improve

- Advanced video editing techniques
- Audio mixing and sound balancing

- Color grading and correction
- Camera framing and shot composition
- Storyboarding and planning
- File management and organization
- Visual effects and transitions

Timeline for Completion

Week 1

- Brainstorm project ideas
- Write the script
- Create a storyboard and filming plan

Week 2

- Film scenes
- Record dialogue and audio
- Collect music and sound effects

Week 3

- Edit the first draft
- Add transitions, effects, and sound design
- Review and revise footage

Week 4

- Complete final edits and color grading
- Export the finished film
- Present the project and reflection

Challenges You Anticipate

- Coordinating filming schedules
- Improving audio quality
- Learning more advanced editing tools
- Managing large video files
- Staying organized throughout the project

AP CSP Connections

- Digital media processing
- Computing software and tools
- Problem solving and troubleshooting

- User experience and visual design
- Data and file management
- Creative development process
